

# Weather For Fire Operations

## *Table of Contents*

---

---

- 1.0 Foreword and Course Objectives**
- 2.0 Introduction – *What is Weather?***
  - 2.1 Fire Weather and the Fire Behavior Triangle
- 3.0 The Structure of the Atmosphere**
- 4.0 Dry Bulb Temperature and Heat**
  - 4.1 Horizontal Variations in Temperature
    - 4.1.1 Temperature Variations Within a Forest
  - 4.2 Vertical Variations in Temperature
    - 4.2.1 Temperature Inversions
- 5.0 Atmospheric Moisture and Relative Humidity**
  - 5.1 Atmospheric Moisture Definitions
  - 5.2 The Temperature – Water Vapor Relationship
  - 5.3 Variations in Water Vapor
    - 5.3.1 Horizontal Variations in Water Vapor
    - 5.3.2 Vertical Variations in Water Vapor
- 6.0 Temperature, Relative Humidity and the Fire Environment**
  - 6.1 Temperature and Fire Behavior
    - 6.1.1 The Effect of Temperature on Relative Humidity
    - 6.1.2 The Effect of Temperature on Atmospheric Stability
  - 6.2 Relative Humidity and Fire Behavior
- 7.0 The Burning Day**
- 8.0 Atmospheric Stability**
  - 8.1 Fundamentals of Stability
    - *Physical Principles*
    - *Dry Adiabatic Lapse Rate*
      - 8.1.1 Atmospheric Moisture and Stability
        - *Moist Adiabatic Lapse Rate*
  - 8.2 Measuring Atmospheric Stability
  - 8.3 Daytime Heating and Convection
  - 8.4 Atmospheric Stability Simplified
  - 8.5 Visual Indicators of Stability
    - 8.5.1 Characteristics of a Stable Atmosphere
    - 8.5.2 Characteristics of an Unstable Atmosphere
  - 8.6 Stability Modifications
  - 8.7 Atmospheric Stability and the Fire Environment
- 9.0 Atmospheric Circulation, Pressure Patterns and Wind**
  - 9.1 The General Circulation – Planetary Scales of Motions
  - 9.2 “Real World” Weather Charts – Synoptic Scale of Motions
  - 9.3 Pressure and Wind Relations

- 9.3.1 Pressure Gradient Force
- 9.3.2 Coriolis Force
- 9.3.3 Balanced Flow – *The Geostrophic Wind*
- 9.3.4 The Centrifugal Force and the *Gradient Wind*
- 9.3.5 The Observed Wind
- 9.3.6 Frictional Forces
- 9.4 Wind Reporting
- 9.5 Wind and Fire Weather
  - 9.5.1 Wind and Fuel Moisture
  - 9.5.2 Rate of Spread and Burn Patterns
  - 9.5.2 Wind and Fire Suppression Safety

## 10.0 Surface Weather Systems

- 10.1 Highs and Lows (Ridges and Troughs)
  - 10.1.1 Characteristics of Highs and Lows (Ridges and Troughs)
- 10.2 Air Masses
  - 10.2.1 Definitions
  - 10.2.2 Air Mass Source Regions and Classification
- 10.3 Fronts
  - 10.3.1 Cold Front Characteristics
  - 10.3.2 Warm Front Characteristics
  - 10.3.3 Stationary Fronts
- 10.4 “Cyclogenesis” and the Idealized Low Pressure System
- 10.5 Watching the Weather

## 11.0 Clouds and Weather

- 11.1 Cloud Formation
  - 11.1.1 Convergence
  - 11.1.2 Orographic Lift
  - 11.1.3 Convection
  - 11.1.4 Mass Ascent or Large Scale Lift
  - 11.1.5 Turbulent Mixing
- 11.2 Cloud Typing and Identification
  - 11.2.1 Cloud Classification
  - 11.2.2 Typical Cloud Formations
- 11.3 Representing Weather Information on the Surface Weather Chart
  - 11.3.1 Cloud Information
  - 11.3.2 Visibility and Obstructions to Vision

## 12.0 Convective Clouds and Thunderstorms

- 12.1 Types of Thundershowers
  - 12.1.1 Thermodynamic Thundershowers
  - 12.2.2 Dynamic Thundershowers
- 12.2 Stages of Cumulonimbus Development
  - 12.2.1 Thundershower Development and Changes to the Wind Field
- 12.3 Wet and Dry Thundershowers
- 12.4 Microbursts
- 12.5 Other Thunderstorm Hazards
  - *Hail*
  - *Tornadoes*
- 12.6 Lightning
  - 12.6.1 Lightning Formation
  - 12.6.2 Positive and Negative Lightning

## 13.0 The 500 Mb Chart

- 13.1 Constant Level vs. Constant Pressure Charts

- *Relationship Between Surface Pressure and 500 Mb Heights*
- *Relationship Between Temperatures Aloft and 500 Mb Heights*
- 13.2 The 500 Mb Chart
  - *“Longwaves” and “Shortwaves”*
  - *Why is the 500 Mb Chart Important?*
- 13.3 The 500 Mb Chart and Weather
  - *The Relationship Between 500 Mb Features and Surface Features*

#### **14.0 Significant Fire Weather Patterns**

- 14.1 Blocking Upper Ridges
  - *“Omega” Block; Cut-off Highs; High-Low Block*
- 14.2 Upper Ridge Breakdowns
  - 14.2.1 Temporary Upper Ridge Breakdown
  - 14.2.2 Permanent Upper Ridge Breakdown
- 14.3 Cold Lows

#### **15.0 Upper Ridge Breakdown and Cold Low**

##### ***A Case Study – Northwest Territories August 4-7, 1990***

- *Background*
- *Evolution and Discussion*
- *Conclusion*

#### **16.0 Venting and Smoke Control**

- 16.1 Smoke and Carbon Monoxide
- 16.2 Smoke Production
- 16.3 Smoke Dispersion
  - 16.3.1 Atmospheric Stability and Smoke Dispersion
  - 16.3.2 Fire Intensity and Stability Modifications
  - 16.3.3 Wind and Smoke Dispersion
- 16.4 Venting and the Ventilation Index
  - 16.4.1 Ventilation Index
- 16.5 Smoke Control Forecasts

#### **17.0 Mountain Meteorology**

- 17.1 Mountain Barriers, Channeling, and Funneling
- 17.2 Turbulence
- 17.3 Local Thermally Induced Winds
  - 17.3.1 Slope and Valley Winds
  - 17.3.2 Slope/Valley Winds and the Synoptic Wind
  - 17.3.3 Land and Sea (Lake) Breezes

#### **18.0 A Typical Summer Day – The Wind Regime**

- *Winds Before Sunrise, mid-morning, afternoon, early evening*

#### **19.0 Special Wind and Weather Considerations – “Subsidence”**

- 19.1 Large Scale Subsidence
- 19.2 Subsidence and Flow Over Barriers

#### **20.0 Extreme Fire Behavior**

- 20.1 Convection and Fire
- 20.2 Crowning, Long Range Spotting, and Fire Whirlwinds – Atmospheric Considerations
  - 20.2.1 The Convective Column and Atmospheric Stability
- 20.3 Blow-Up Fires
  - 20.3.1 Low Level Jets
    - *Negative Wind shear*

- *Byram's Wind Profiles*

- 20.4 Cold Fronts and Extreme Fire Behavior
- 20.5 Fire Behavior Warning Signals
- 20.6 Common Denominators of Fire Behavior on Tragedy or Near Miss Fires
  - 20.6.1 Safety Considerations

#### **21.0 The Fire Weather Forecast**

- 21.1 The Fire Weather Forecast vs. The Environment Canada “Public” Forecast
- 21.2 Elements of the Fire Weather Forecast
  - 21.2.1 Short Range Forecasts
  - 21.2.2 Key Words in the Fire Weather Forecast
- 21.3 Weather Forecasting and the Limitations of the Forecast
- 21.4 Spot Forecasts
  - 21.4.1 Content of the Spot Forecast

#### **22.0 Warnings and Advisories**

- 22.1 Extreme Fire Behavior Warning
- 22.2 Fire Behavior Advisories
- 22.3 Weather Advisory
- 22.4 Response and Responsibility

#### **23.0 Weather Briefings**

- 23.1 General Guidelines
- 23.2 Using the Surface and 500 Mb Chart in Your Briefing
